

ADD RED X if the file has been different than saved state.

If it's at it's saved state the X is gray

Change to + button sets up a folder search, and autohotkey edit for the button, allowing for run, to open app with saved file

Highlight all the foldable sections that have been moved out of saved state, deletes should have undo.z

Add option bar on picture click that will offer these options and an added base64 text string to embed the image with the .md file unless theres a better way.

add favorites to bottom of list, this will be folders that will show up in your tree in the left sidebar

There will be a star icon next to file tree that will bring up this same dialog, there will be custom paths with an + button, cycle click - 1st click folder and child folders , 2nd click, only that folder 3rd click unselected.

User saveable lists with category labels from user.
